Let The CHILDREN PLAY!

Rephouse is a leading manufacturer of recycled rubber surfacing products using custom formulated polymer binders. Using a unique manufacturing process, a broad range of impact absorbing safety surface rubber tiles are produced with a wide choice in bottom profiles, installation options and tile sizes.

Safety for playground surfaces: hard materials like concrete, asphalt or packed soil are dangerous because a child's head striking either can suffer brain damage, permanent disability or even death. Gravel, sand and shredded bark offer more protection but they produce problems of their own requiring constant maintenance, sanitation risks and a greater danger for eye injuries or accidental ingestion during play.

Playflex™ impact absorbing safety surface rubber tiles are a terrific alternative to these traditional surfaces. **Playflex™** is engineered to provide optimum shock attenuation and slip resistance thereby providing a safer surface. As well as being cost effective, little maintenance is required and it is easily installed.

Because of Rephouse's versatile design flexibility, a particular design of impact absorbing safety surface rubber tile can be installed with either a hard subsurface or a soft one such as sand or gravel. Rephouse can assist you with your choice offering an unrivalled colour choice and further provide straight forward advice on installation, service and maintenance tips.

The **Playflex™** impact absorbing safety surface rubber tile programme is complimented further with unique accessories such as bevelled edges, outside and inside corner pieces, handicapped ramps, sand boxes and protective curbing.

Rephouse prides itself in initiating the transformation of hundreds of thousands of tonnes of rubber waste into useful, durable and a long lasting safer surface.

Give us a call for further details.

Playflex™ is available in two distinct styles:-

Royal Tiles – are supplied with a coloured synthetic EPDM top and a soft, recycled black rubber underbody.

Basic Tiles – are supplied using recycled black rubber pigmented either red or green or supplied plain black.
